A turf update from the GO research farm

## Turf Research Update

By Duane Klundt

At Grassland Oregon, we are excited about the future of our research efforts in turf. We continue to look for ways to bring new products to the market that are not just a repeat of what we already have. Some innovations we have, like Memphis, Wichita, and Olympus, have been performing well in the current tall fescue NTEP. We are also pleased to say that Birmingham is performing quite nicely in the Maryland/Virginia trials. Grassland Oregon currently has 3 new perennial ryegrasses entered in the 2016 Perennial trial (GO-141, GO-142, and GO-143). We can't wait to see how they rise to the top! Lastly, we have entered 3 new Kentucky Bluegrasses in the 2017 Kentucky Bluegrass trial (GO-2628, GO-22B23, and GO-2425). These are varieties that will complement our current stable of Skye, Prosperity, and Milagro. Please keep an eye on all of these as we are sure that they will be an enhancement to your current program, now and in the future.
