

GO Seed Research Partners

GO Seed varieties are developed and marketed through rigorous scientific investigations with much of the work performed by third party research organizations. We encourage the comparison of our products to competitors and assessing their performance in innovative systems. We look forward to discussing your ideas and using our expertise in soil health, varietal strengths, and our understanding of the markets to be collaborative partners in your research program.

We are actively seeking systems-based research projects in collaboration with farmers and land managers who will communicate during decision making processes, are willing to follow specified protocols, and agree collect samples for analysis.

To be considered, a completed Agreement and Project Summary is expected a minimum of one month before the seeds are to be planted.
